I have 'pre-incident' on the map legends. Should I change that to 'pre-release'? If needed, I can correct that is afternoon with any other changes resulting from the call.

Just wanted to check in to make sure I'm understanding terminology correctly and that Michael Copeland and Bob Brobst's are understanding our terminology as well.

What we have been referring to as "pre-incident" data (i.e. data collected immediately before the response—a day or two or hours beforehand) is now "pre-release" data.

"Historic data" is anything older than pre-release?
